Percentage and number of new vertical HIV infections by cause of transmission, 2021

Highlights from Global Alliance action plan:

- Reduce neonatal, infant, child and maternal mortality rates by 2025.
- Implement at all levels of the health pyramid, the triple elimination of mother-to-child transmission of HIV, syphilis and viral hepatitis B, as well as paediatric tuberculosis.
- Diagnose 95% of children exposed to HIV before the age of 2 months.
- Organize annually in Abidjan an International Symposium on Paediatric Management of HIV and PMTCT to strengthen the regional framework for sharing good practices, innovations and scientific advances on the response to paediatric AIDS.

“ Côte d'Ivoire reaffirms its commitment to create an enabling environment by combating all forms of stigma and discrimination and violations of the rights of people living with HIV, especially women, children and adolescents living with HIV through the revision of legal frameworks and their effective implementation. ”

— Pierre N'Gou Dimba, Minister of Health, Public Hygiene and Universal Healthcare
