Percentage and number of new vertical HIV infections by cause of transmission, 2021

Highlights from Global Alliance action plan:

- Scale up of point of care testing for early infant diagnosis (prioritizing north region, frequent flooding and conflict zone, areas with internally displaced persons, cultural issues and others); Increase access to treatment and viral suppression and to reduce morbidity and mortality in this population group.
- Scale up of youth friendly services coverage (only 24% out of 1721 ART Health facility).
- Implement economic strengthening programs for adolescents and young people (high HIV prevalence and most deprived population, education access and self-sustenance for adolescent girls and young women).
- Ensure representatives of people living with HIV are included on decision making structures.

“Finally, we stress that Mozambique is committed to: 1. Continue to mobilise domestic and external resources to cover existing gaps; 2. Increase access to treatment by strengthening the community response; and 3. Accelerate the implementation of the plan of the gut elimination of HIV, Syphilis and Viral Hepatitis. These commitments will help the country end Pediatric AIDS.”

— Her Excellency Ms Saozinha Paula Agostinho, Permanent Secretary Minister of Health
